EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Seth Kim on 6/10/2005.

The application has been amended as follows:

- Claim 18, line 4, replace "chamber; and" with - - chamber, wherein the plurality of discharge ports are formed at a distance from each other in a widthwise direction of the guide passage; and - -
2. The following is an examiner's statement of reasons for allowance: the prior art does not anticipate nor render obvious the combination set forth in the independent claims, and specifically does not show a cool air supplying apparatus of a refrigerator comprising a guide passage formed at a rear wall of a refrigerating chamber and provided with a plurality of discharge ports towards the refrigerating chamber for guiding cool air to a rear side of the refrigerating chamber, wherein the plurality of discharge ports are formed at a distance from each other in a widthwise direction of the guide passage and a direction control plate disposed near a surface of the guide passage where the discharge ports are formed and moving along a widthwise direction of the guide passage, for selectively opening and closing a selection of the discharge ports to control a direction of cool air discharged into the refrigerating chamber.

Art Unit: 3744

U.S. Patent 6,032,480 to Kim teaches a refrigerator having a device for opening/closing the cool air discharge ports, U.S. Patent 6,634,181 to Kim et al. teaches a cooling air supply apparatus of refrigerator and U.S. Patent 4,688,393 to Linstromberg et al. teaches a power switch and baffle assembly for a refrigerator, however none of the prior art references teach a guide passage formed at a rear wall of a refrigerating chamber and provided with a plurality of discharge ports towards the refrigerating chamber for guiding cool air to a rear side of the refrigerating chamber, wherein the plurality of discharge ports are formed at a distance from each other in a widthwise direction of the guide passage and a direction control plate disposed near a surface of the guide passage where the discharge ports are formed and moving along a widthwise direction of the guide passage, for selectively opening and closing a selection of the discharge ports to control a direction of cool air discharged into the refrigerating chamber.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Art Unit: 3744
